

**State of Montana
National Highway Traffic Safety EMS Reassessment
June 21-23, 2005
Final Report**

We are pleased to provide a copy of the final report for the 2005 NHTSA EMS Reassessment. This report represents the assessment team's recommendations for continue development and implementation of Montana's EMS system.

- Some of these recommendations are very relevant and current and we will be evaluating how to implement them right away.
- Some are relevant, but due to various factors such as other higher priorities, limited staff, time and funds, they will be left for another day.
- Some are not relevant and we may never consider them.

This report will be reviewed by our Section and we will assess which recommendations should be incorporated into our workplan and which should be left for later.

This report will be review by the EMS System Task Force and they will decide which recommendations need to be incorporated into the EMS System Plan which is being drafted.

I wish to personally thank the staff of the EMS & Trauma Systems Section, the EMS System Task Force and the numerous presenters and others who made this assessment successful. This document along with other activities will help guide the continued development of our EMS System for some time to come.

Please feel free to contact our office for more copies of this report or download it from our website at: <http://MontanaEMS.mt.gov>
